

Education: Go Online Now, says Nishith Desai Associates

By [Fiinews](#) - March 31, 2020

Govt urged to be facilitator

The government should urgently reconsider online higher education, which has previously not taken off, according to a report by Nishith Desai Associates.

Authors Aarushi Jain and Vivek Kathpalia have made suggestions in the report “Online Higher Education: Time for De-regulation is now” released on 30 Mar 2020.

The suggestions:

All universities should be authorized to permit affiliated colleges and institutes to offer programs online. Where required, professional bodies such as Bar Council of India, National Medical Commission etc. can be consulted by universities prior to giving permissions to offer courses online.

There should be no obligation on higher education institutions to use SWAYAM platform. Instead of creating a bottleneck by mandating approvals from regulator for use of other platforms, higher education institutions should be allowed to use a platform of choice.

In the wake of a pandemic (COVI-19), many well-known online platforms are aiding universities and colleges all over the world to take their programmes online. Platform freedom will reduce the burden on SWAYAM and will encourage more homegrown platforms.

Role of the government should change from being a regulator to that of a facilitator. Government should set qualifying criteria for institutes, provide guidelines for universities to decide what kind of courses can be offered online and the standards of education to be maintained, review functioning of the online programmes including completion rate and job statistics, seek performance based reports, but leave everything else to the universities.

It is well known that online degrees and diplomas have been successfully offered by many renowned universities across the globe. Progressive countries have permitted these online programs with limited regulation. India needs to quickly do this.

While Indian students are keen to join such courses, these online degrees don't get recognized in India because they haven't been obtained while completing the programme at a “campus”. This is too old school.

When the world is coming together to fight a pandemic, and the only way of staying connected is online, regulatory and territorial barriers should not stand in the way of education. Freedom to collaborate and choose is paramount. Due credit should be given to such online programmes, at least to the ones offered by renowned institutes. A list of such institutes, Indian and international, can be released by government for such purposes.

Given the projected global economic impact of this pandemic, online education can drastically reduce burden on students and education systems. Those countries that have unshackled their online education systems will realize just how beneficial it is, especially in such desperate times. Even though a pandemic may be a temporary situation, its time India learns its lesson and leapfrog to deregulate online higher education.

Background:

For years, India has shied away from unleashing the full power of formal online higher education.

While certification courses can be offered online, online degrees and diplomas offered by colleges and universities continue to suffer from regulatory constraints.

The first major step towards recognizing online education was taken in 2018, when University Grants Commission (UGC) introduced regulations allowing certain category of higher education institutions to offer their offline programmes, online, with UGC's approval.

Sadly, 2 years later, very few institutions have the approval to offer online programmes under these regulations.

The UGC regulations also require that higher education institutions should offer online courses through SWAYAM platform. Any other platform can be used only with the approval of the UGC.

AICTE (All India Council For Technical Education) has no regulations for online degree and diploma programmes as yet. Lack of regulation also creates confusion with respect to what is or is not allowed online.

There are also institutes of eminence, which can provide courses online.

However, even these institutes are handful in number and can offer only part of their course online, i.e. subject to limit of 20% of any programme.

Therefore, the looming question before us is: Are these few institutes sufficient for continuity of higher education in a country of 1.3 billion?

No doubt, government is doing its bit. UGC released a list of ICT initiatives of Ministry of Human Resource Development (MHRD) and UGC for teaching and learning, which provides a repository of study material to students.

This is good from a short-term perspective.

However, all crisis brings opportunity and so is coronavirus, COVID-19, pandemic. This is a big one, staring at us in the face. *fiinews.com*
