5G TECHNOLOGY IN INDIA

Strategic, Legal And Regulatory Considerations

Dr. Mihir Parikh, Vaibhav Parikh and Puja Saha undertook a detailed analysis of strategic, legal and regulatory issues involved with the 5G technology in India. 5G technology is bringing along with it a much greater revolution than itself. At the base level, it will significantly increase the capacity and reach of existing mobile networks through greater data throughput and ultralow latency. But in a larger sense, 5G will become the backbone of many fourth industrial revolution (IR4) technologies like AI, AR/VR, drones, IoT, telemedicine, and autonomous vehicles. Many kinds of devices, billions in number, will be connected to each other through 5G and offer the kind of capabilities and user experience never seen before. Our businesses and our lives will change forever. And India is not staying behind in this revolution.

This research paper provides an insight on the 5G technology in non-technical terms, overviews 5G applications for various sectors, broadly outlines the regulatory landscape for 5G in India, and finally discusses various critical strategic, policy, regulatory, technical and behavioral considerations. The research paper can be accessed [here](#).
